

# Dokku介绍

英选&码市 Ivan

部署任何类型的应用

# 基于 Docker 容器技术

只需使用Git将代码push到对应的仓库上就能让Dokku来自动构建并部署应用。

# Dokku 常见命令

---

## 基础操作

dokku apps:create rails-app

dokku --rm run rake db:migrate

dokku enter web rails c

dokku logs rails-app -t

## 端口及域名

dokku domains:add xxx.com

dokku proxy:ports-set rails-app http:80:3000  
https:443:3000

dokku letsencrypt renew

## 配置

dokku config:set SECRET\_KEY\_BASE=xxx

dokku storage:mount xxx/uploads:/app/public/uploads

dokku postgres:link rails-app-db

## 其他

dokku logs rails-app -t

dokku nginx:access-logs -t

dokku ps:restart

# Dokku高级应用

---

## 多进程

```
# Procfile  
  
web: bundle exec puma -C config/puma.rb  
  
worker: bundle exec sidekiq -C config/sidekiq.yml  
  
# DOKKU_SCALE  
  
web=1  
  
worker=2
```

## 部署Hooks

```
# app.json  
  
{"scripts": {  
    "dokku": {  
        "predeploy": "bundle exec rake db:migrate",  
        "postdeploy": "curl  
https://external.api.service/deploy_state=success" }}}}
```

# THANKS
